Exhibit B / Company Responsibilities

Company will be responsible for developing the stories:

[27406089] (feature) User can see social connection graph with another user   (5pts)

Probably on user profiles, listings

[27405897] (feature) User can confirm a phone # for text alerts   (3pts)

Twilio text message alerts for message of certain types, managed by alert settings Confirm # flow to make sure it's their number

[27405631] (feature) User can rate a listing   (5pts)

They have to have stayed there. Prompt with message at end of availability term, cron job to check daily booking expirations These will be ghosted until rated

[27405327] (feature) User can connect their account with Linked In   (2pts)

Grab OAuth token from Linkedin, store for later use but do not plan on doing heavy social integration upfront.

[27404517] (feature) User can pay for a space   (2pts)

This happens after an approved application is sent back. (with expiration date) The plan is to just link to Paypal and handle payment there, pushing funds back into the PivotDesk corporate Paypal account.

[27404387] (feature) User can approve an application   (3pts)

Done from inbox -> application message view. Creates payment request to applicant with an expiration date

- removes availability
- create payment request
- creates booking with reserved status

[27403841] (feature) Users can manage their organization profile   (1pts)

Not everyone wants emails, you'll have types of msgs that you can get alerts for Also general attributes, billing address

- billing info
- listings and prices
- alert/messaging settings

[27410997] (feature) User can interact with threaded messages of various types   (5pts)

Parent story covering notifications, sending, read status, etc

[27402919] (feature) User can view organization's messages (inbox)   (2pts)

Listing of thread beginnings (not whole thread though) Types of msgs include feedback, applications, inquiries, general messages Maybe sorting? TBD

[27402887] (feature) User can apply for a space   (1pts)

Must supply # desks, dates, request message

[27402783] (feature) User can view a single listing   (3pts)

All meta data shown, favoriting, actions to take (inquire, apply)

[27402673] (feature) User can view favorite listings   (2pts)

Should have the ability to unfavorite also

[27402651] (feature) User can favorite a listing   (1pts)

[27402641] (feature) User can search for listings   (5pts)

Required: location (zip or city) Optional: Desks, move-in and duration, amenities (shown as filters on the results page) Results shown as list for now (MVP) Should support pagination, bookmarking/deep linking, etc.

- inital search by geolocation
- filters available on list view
- list of results shown
- Should hide listings that are reported as spam more than X times.

[27404867] (feature) User can create availabilities on a listing   (2pts)

What dates this listing is available (these have to be 1 month increments) These are adjusted on a payment receipt to reflect new availabilities Assuming for MVP one contiguous range on listing creation

[27402027] (feature) Use can create space listing   (5pts)

Meta data to include Location, Desks, available dates, amenities, office hours, pictures (with captions), cultural fit (like brogrammer, bootstrapped, nerdy, quiet, etc), desk types (drafting table, couch) Also name, descriptions, (optional slug/blurb?) required: location, desks, name, desc., available dates, PRICE

- Must capture organization billing address if not already provided in the organization profile.

[27399783] (feature) User can see a transaction history   (2pts)

Displaying details of all monetary transactions - renting or being rented from.

[27398859] (feature) User can create a new account with associated organization   (3pts)

Capturing name, email, password, organization name, and optional avatar/picture. Users will be flat - i.e. all users are equal admins in the system. Also mandatory profile information like CC or billing address

- Capture basic fields
- Provide ability to handle a 'signup-behavior' URL param that indicates whether the user clicked a 'post listing signup' link or a 'search listings signup' link
- Send user to different post-signup URLs depending on the value of the signup-behavior param

[27398925] (feature) User can logout   (1pts)

[27398485] (feature) User can login using email password   (1pts)

[27422187] (feature) User can share a listing   (1pts)

Link to tweet out, HTML5 embed widget, something similar. This covers both their own listing and other people's listings

[27421123] (feature) User can report a listing as spam   (1pts)

Admin, backend for this? Remove spammed listings?
